

Swedish innovation and tradition from Säffle

BVT Sweden

BVT Sweden was started by a group of senior valve engineers with the ambition of becoming a world leading valve supplier for critical applications in process steam and thermal power plants.

Based in Säffle, we have experts with over 30 years experience in turbine bypass, steam conditioning, temperature control, design and manufacturing processes. Steam conditioning expertise has been part of Säffle history for more than 100 years through the development of the pulp and paper process and the foundation of several companies including Källe Regulatorer by Torsten Källe right here in Säffle.

We design all sorts of control valve systems to fulfill our customer's requirements. The BVT product line is optimized for customer demands, and we have the experience to design, produce and deliver complete solutions. Our products cover steam conditioning valves, pressure reduction valves, stop valves, desuperheaters and spray water control valves. With our partners in HP Valves we are able to supply the complete product range to our customers.

BVT Sweden is committed to servicing our valves in field with world leading experts, we also do Plant engineering and service of other brands in field to support customers in problem solving. BVT Sweden is developing products for the future and are part of several project for future energy challenges such as: Concentrated Solar Power, CCPP and Clean Super Critical PP.

BVT Sweden: your long-term partner for the future.

Markets and applications

We provide our products and our services to major EPCs and manufacturers of turbines, HRSG's and utility boilers for power generation across the globe.

With a long history in CHP, CCPP, Concentrated Solar Power and Super Critical PP , our critical control valves are used in bypass, desuperheating, isolation and spray water control applications.

What we offer our customers

PRODUCTS	BVT has the experience and the resources to manage customer demands of complete steam conditioning control valves and isolation valves.
PLANT ENGINEERING	With over 30 years experience, our engineering department can solve customer problems in the field with complete system solutions.
SERVICE	Our certified technicians with long experience perform maintenance service on our own products as well as those of other suppliers.

Products

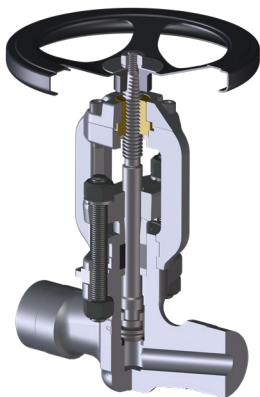

BVT-TB

Turbine bypass valve with flexible design.

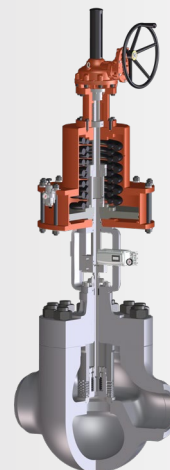

BVT-DLH

Steam attenuator with floating liner.

Large and small bore isolation valves.

Complete range of gate, globe and check valves.

Severe and General service control valves.

Large wide range of capacities and trim designs.

BVT has the experience, knowledge and the resources to manage customer demands of complete steam conditioning control valves and isolation valves. Based on 100 years of experience in steam conditioning systems developed in Säfte based on the pulp and paper industry, BVT is a world-leading

supplier of steam conditioning systems. Together with our partners HP valves and KVT valves we provide small isolation valves, water valves and actuation, we have a complete range of products.

PRODUCTION

BVT products are manufactured in factories in Sweden, Korea and China. We maintain a high level of quality by working closely with our manufacturing sites.

BVT Sweden hold certificate towards ISO 9001 and 14001.

Plant Engineering

TECHNICAL CONSULTING

BVT Sweden supports you in choosing the correct technology and solutions for unique requirements considering all available options. These solutions can increase the efficiency of thermal power plants.

CRITICAL APPLICATIONS

We have over 30 years experience and world leading competence regarding critical applications within the power industry, as well as design of related products.

PRESTUDIES AND PROJECT MANAGEMENT

We perform prestudies and planning of new facilities. The prestudy determines if the project can be carried out regarding economic, technical and time aspects. Prestudies are adapted for each individual project.

Lisa Nord-Ågren
Engineering Manager

When working on site at our customers, we contribute to the competence of your team. We perform trouble shooting, review operating conditions and support in optimization and preventative actions. Problems may include noise and temperature control.

Service

BVT service can dramatically improve reliability and reduce ongoing issues, when carrying out our maintenance program. Our certified technicians perform detailed inspection and service on our own products as well as those from other suppliers. Based on our extensive experience, we always guarantee a level of quality and service at competitive cost-effective price.

We do root cause analysis and help the customer to solve their ongoing issues. Our specialists are available globally, 24/7 to support customers with short notice.
